CONTENTS TO VOLUME 47

Computational physics	*Issue*	*Page*
Brackbill, J.U. On modeling angular momentum and vorticity in compressible fluid flow	1	1
Kirby, P. A simulation code for 3-dimensional non-linear incompressible resistive MHD in a periodic cylinder	1	17
Schatz, C., B. Amaee and J.N.L. Connor The centrifugal sudden distorted wave method for calculating cross sections for chemical reactions: angular distributions for $Cl + HCl \rightarrow ClH + Cl$	1	45
Allison, J., R. Brun, F. Bruyant, F.W. Bullock, C.Y. Chang, J-J. Dumont, P. Hattersley, R.J. Hemingway, P.R. Hobson, D. Hochman, T. Kawamoto, B. Lorazo, J. Mallet, A.C. McPherson, S.W. O'Neale, G. Patrick, A. Possoz, A. Rossi, D.R. Ward, C.P. Ward and P. Zanarini An application of the GEANT3 geometry package to the description of the OPAL detector	1	55
Moriarty, K.J.M. and C. Rebbi Large-scale quantum field theory calculations on supercomputers	1	75
Diercksen, G.H.F. and J. Karwowski Invariance properties of the moments of the Hamiltonian matrix as a test of the correctness of configuration interaction programs	1	83
Succi, S. Cellular automata modeling on IBM 3090/VF	2&3	173
Baig, M. Simulation of the $\lambda\phi^4$ lattice theory on a loosely coupled array of processors	2&3	181
McMullin, J.N., C.E. Capjack and S. Au Multiparabolic approximation for ray tracing in linear plasma columns	2&3	187
Roberts, L. Evaluation of the FPS-164 computer for high energy physics pattern recognition problems	2&3	195
Tennyson, J., P.G. Burke and K.A. Berrington The generation of continuum orbitals for molecular *R*-matrix calculations using Lagrange orthogonalisation	2&3	207
Mann, P.J. Finite difference methods for the classical particle–particle gravitational *N*-body problem	2&3	213

Computational physics (continued)	Issue	Page
Jamieson, M.J. Numerical solution of the restricted rotor eigenvalue equation in molecular collision calculations	2&3	229
Di Genova, G. and M. Matone A compact algorithm for the implementation of Monte Carlo kinematics in computer simulations of d-dimensional lattice gauge theories	2&3	235
Computer programs in physics		
Isaacson, A.D., D.G. Truhlar, S.N. Rai, R. Steckler, G.C. Hancock, B.C. Garrett and M.J. Redmon POLYRATE: A general computer program for variational transition state theory and semiclassical tunneling calculations of chemical reaction rates	1	91
Herman, M. and G. Reffo Codes for the combinatorial calculation of few quasiparticle state densities in spherical and deformed nuclei	1	103
Cabras, G., V. Roberto and G. Salemi UNIDFT: A package of optimized discrete Fourier transforms	1	113
Chiu, T.-W. and T.-S. Guu A shift-register sequence random number generator implemented on the microcomputers with 8088/8086 and 8087	1	129
Eastwood, J.W. ORTHOVEC: A REDUCE program for 3-D vector analysis in orthogonal curvilinear coordinates	1	139
Gan, Y.-p., F.-q. Liu and T.K. Lim Program to calculate Raynal–Revai coefficients of a three-body system in two or three dimensions	1	149
Fraga, S., M. Klobukowski, J. Muszynska, K.M.S. Saxena, J.A. Sordo, J.D. Climenhaga and P. Clark Research in atomic structure: a configuration interaction program with relativistic corrections	1	159
Thompson, I.J. and A.R. Barnett Modified Bessel functions $I_\nu(z)$ and $K_\nu(z)$ of real order and complex argument, to selected accuracy	2&3	245
Bouanich, J.P. Analytic vibration–rotational matrix elements for diatomic molecules	2&3	259
Zhang, J.F., D.B. Newland and M.T.C. Fang The computation of self-similar arcs	2&3	267
Badavi, F.F., L.W. Townsend, J.W. Wilson and J.W. Norbury An algorithm for a semiempirical nuclear fragmentation model	2&3	281
Burgess, A. and C.T. Whelan BETRT – A procedure to evaluate the cross section for electron–hydrogen collisions in the Bethe approximation to the reactance matrix	2&3	295

Computational physics (continued)	*Issue*	*Page*
Dagher, M. and H. Kobeissi FFC – a program for calculating Franck–Condon factors and *R*-centroids for transitions between the vibrational–rotational levels of two electronic states of a diatomic molecule	2&3	305
Leander, G.A. Simulation of nuclear quasicontinuum gamma-ray spectra	2&3	311
García-Toraño, E. and A. Grau Malonda EFYGA, a Monte Carlo program to compute the interaction probability and the counting efficiency of gamma rays in liquid scintillators	2&3	341
Máca, F. and M. Scheffler A new version of the program for the calculation of the Green's function for a crystal surface or interface	2&3	349
Ryšavý, M. MISHA – a system for calculations with arbitrary arithmetic precision	2&3	351
Judge, R.H. A new version of 'ASYROT' for the HP Vectra or any IBM AT compatible computer	2&3	361
Griffiths, D.F. Book review	2&3	365
Bao, C.-g., Y.-p. Gan and X.-h. Lui Erratum notice. Program to calculate transformation brackets of hyperspherical harmonic functions of a three body system (CPC 36 (1985) 401)	2&3	367
Barkai, D., M. Campostrini, K.J.M. Moriarty and C. Rebbi Erratum notice. Applications development on the ETA-10 (CPC 46 (1987) 13)	2&3	368
Rand, D.W. PASCAL programs for identification of Lie algebras. Part 1. RADICAL (AALB – CPC 41 (1986) 105)	2&3	369
